

CARE OF CLOSED CHEST DRAINAGE

Name:	Job Number:	Rating:		
Unit:	Job Title:			
Contract Date:				
Evaluation Key: M- Met NM- Not Met NA- Not Applicable		Method of Evaluation: Knowledge: Exam(Written/Oral) Skills: Demonstration/Discussion Attitude: Observation		
Rating Scale: Met: 90% - 100% Not Met: 89% & below and remedial once NA-(Not applicable) – entries to be deducted from the total score				
COMPETENCIES		EVALUATOR ASSESSMENT		
		M (1)	NM (0)	NA
I.	KNOWLEDGE			
1.	Discuss rationale chest tube insertion in are of practice.	☐	☐	☐
2.	Explain the correct positioning of the patient for the insertion of a chest tube and the correct way to connect the test tube to the appropriate closed chest drainage system.	☐	☐	☐
3.	Explore reasons for completing vital signs initially every 2 hours and then as needed e.g. provides baseline and can indicate recurrence of the condition that required the need for chest tube insertion.	☐	☐	☐
4.	Discuss rationale for monitoring and recording amount and colour every 2 hours i.e. data for diagnosis if not known.	☐	☐	☐
5.	Explain why assessment of pain at the insertion site or for chest discomfort is important e.g. interferes with adequate deep breathing and pain at insertion site particularly with inspiration may indicate improper tube placement.	☐	☐	☐
6.	Explore why evaluation of the chest drainage system for fluctuation in water-seal chamber and all connection sites is important e.g. water level rises and falls with respiration until lung is expanded and persistent bubbling indicates an air leak and must be corrected.	☐	☐	☐
7.	Explain the rationale for assessing insertion site and surrounding skin for presence of subcutaneous air and signs of infection/inflammation with daily dressing change is important i.e. skin integrity is altered and can led to infection and/or subcutaneous emphysema.	☐	☐	☐
8.	Discuss rationale for having 2 chest drainage clamps close to closed chest drainage system at all times.	☐	☐	☐
9.	Explore safe transfer procedure/s for patient with closed chest drainage system and at what height it is safe to have the closed chest drainage system.	☐	☐	☐
10.	Explain how to document the chest tube site, initial chest drainage amount and color and any samples taken for investigations in the patient notes.	☐	☐	☐
II.	SKILLS			
1.	Prepare items and equipment required for chest tube insertion and closed chest drainage system.	☐	☐	☐
2.	Demonstrate the correct positioning of the patient for the insertion of a chest tube and the correct way to connect the test tube to the appropriate closed chest drainage system.	☐	☐	☐
3.	Demonstrate how to take vital signs and complete a respiratory assessment before, during and after chest tube insertion, amount of suction applied, and how to measure the amount and type of drainage.	☐	☐	☐
4.	Demonstrate safety measures associated with closed chest drainage including the correct water-level requirement, and use of the 2 chest tube clamps.	☐	☐	☐
5.	Complete the monitoring and recording of the amount and colour of the chest drainage fluid and how to evaluate the chest drainage system for fluctuation in water-seal chamber and all connection sites.	☐	☐	☐
6.	Explain the rationale for assessing insertion site and surrounding skin for presence of subcutaneous air and signs of infection/inflammation with daily dressing change is important i.e. skin integrity is altered and can led to infection and/or subcutaneous emphysema.	☐	☐	☐
7.	Demonstrate the safe transfer procedure/s for patient with closed chest drainage system and at what height it is safe to have the closed chest drainage system.	☐	☐	☐

8.	Explain how to document the chest tube site, initial chest drainage amount and color and any samples taken for investigations in the patient notes.	☐	☐	☐
9.	Demonstrate the correct labelling of the samples taken and state what is required on the label and why.	☐	☐	☐
10.	Perform proper technique of sharp and waste disposal.	☐	☐	☐
11.	Demonstrate appropriate action when and drainage readings, color are abnormal and bubbling is persistent including the documentation of the findings and action taken.	☐	☐	☐
12.	Explain how to document the chest tube site, initial drainage recording and findings, samples taken in the patient notes.	☐	☐	☐
III.	ATTITUDE			
1.	Not to be judgmental and accepts patient response and/or refusal for the administration of BLOOD and BLOOD PRODUCTS.	☐	☐	☐
2.	Ability of nurse to respond professionally and calmly if a reaction to the administration of BLOOD and/or BLOOD PRODUCTS occurs.	☐	☐	☐
3.	To be self-aware of limitations in knowledge and skills and verbalize these with nurse in charge.	☐	☐	☐
4.	To be approachable and open to answer patient and family's questions and ability to educate both patient and family how to keep the chest tube and drainage system safe, secure and in place.	☐	☐	☐
5.	Attentive to overall patient experience e.g. pain, anxiety and have ability to provide comfort and emotional support as needed.	☐	☐	☐
6.	Ability to organize and facilitate a Reflection session in and on practice after a CLOSED CHEST DRAINAGE SYSTEM learning opportunity occurs and activate findings to improve future practice and response.	☐	☐	☐
	Raw Score			

Formula: $\frac{\text{Raw Score} \times 100\%}{\text{Total Score}} = \text{\% Rating}$
